SUMMARY

Full-stack software engineer with 10+ years of experience building high-performing web applications across enterprise and startup environments. Proven builder with deep expertise in React, TypeScript, and Next.js, translating intricate business logic into clear, dependable interfaces. A close collaborator with design and product throughout the full product lifecycle, known for owning features end-to-end and maintaining a rigorous bar for code quality and testing. Seeking a software engineer role where AI utilization, product ownership, and small team collaboration are core to the mission.

EXPERIENCE

*Walmart Global Tech, **Software Engineer***

Oct 2023 - Present

Served as senior engineer on Walmart's patient check-in application for its healthcare clinics, engineering major features in Next.js, TypeScript, and GraphQL, ensuring ADA compliance, and configuring analytics tracking across the platform.

Acted as tech lead on a prescription-assistance form wizard, gathering business requirements through cross-functional team syncs, delegating feature development across the team, and owning the full release process end to end; including regression, and functional test automation using Playwright and TestCafe, observability analytics dashboard creation in Open Observe and Kafka, and CI/CD production deployment.

Built and ran agentic AI workflows (plan → build → test → review) to automate large engineering migrations, cutting tasks from weeks to days. Orchestrated multi-agent pipelines across 50+ libraries, catching and fixing issues before review. Migrated 26 libraries in 3 weeks and cleared 50 compliance-driven modules solo. Cut per-task effort by up to 75% using custom AI skills and prompt engineering. Delivered all work on time with full CI/CD rigor.

*Tumulty Web Services, **Owner, Technical Product Manager & Web Engineer***

Oct 2021 - Oct 2023

Defined the scope, three-phase delivery plan, and timeline for the Asbury Park High School Hall of Fame site redesign, then built it: a mobile-responsive site with a member directory filterable by year, a donation page, an event page with printable invitation and advertisement forms, and past ceremony photo pages. Moved the site from static HTML/CSS/JS to Next.js and MongoDB on new hosting with SSL, added third-party contact forms, and covered ADA compliance and basic SEO.

Defined the technical roadmap and delivery timeline for the Unleashed Potential, LLC site redesign, then built it: a headless CMS with a content section for podcasts, interviews, blog posts, and YouTube videos, so the owner could present her marketing content herself. Set the keyword and technical SEO strategy, and set up Google Analytics and search engine indexing. Eliminated her \$20-a-month Wix hosting cost by rebuilding the site on Next.js, TypeScript, and Contentful, hosted on free tiers, leaving only an \$8-a-year domain.

Came up with the backend solution to a shipping label problem with orders for the CubbieKit Shopify store and owned its development as lead engineer, tracking work in Linear with twice-weekly standups. Planned the frontend integration with the development team, then built a Node.js server that queries Shopify through GraphQL and creates labels through Shippo, deployed it to Heroku, and tested it with the live store. Worked with customer service on automating return labels, testing with sample orders.

*Vault Innovation Group, **Senior Software Engineer***

Jan 2022 - Feb 2023

Partnered with e-commerce and legal tech startups in a full-stack capacity, delivering sophisticated software solutions across diverse platforms within a fast-paced Scrum/Agile environment.

Built a sophisticated multi-tenant logging system for a legal tech startup, engineering a PHP/Laravel backend and React frontend to provide clients with real-time visibility into user activity and system events.

Developed a multi-tenant e-commerce marketplace platform using Next.js and Python, and a headless Shopify storefront with a Next.js web app and React Native mobile app for a jewelry e-commerce brand, delivering seamless cross-platform shopping experiences.

*Scarinci Hollenbeck, **Technical Product Manager & Web Engineer***

Dec 2013 - Apr 2021

Owned the firm's web platform and web spending budget, including technical strategy, hosting, analytics, SEO, and digital marketing integrations. Partnered directly with marketing leadership and firm directors to prioritize enhancements, align on

business needs, and secure approvals, delivering annual phased roadmaps that translated business needs into requirements and coordinated contractors and cross-functional partners through release.

Introduced a structured SDLC by setting up daily stand-ups and Kanban boards to manage projects across developers, designers, and content writers. Led the migration from a monolithic WordPress site to a headless architecture using Next.js, GitHub Actions (CI/CD), WordPress (GraphQL), and managed cloud MySQL with automated deployment workflows, cutting monthly hosting costs by about 90% and funding new marketing integrations.

Improved the web and internal-user experience through performance and mobile-usability enhancements, technical SEO and Algolia search improvements, marketing automation integrations, and a SharePoint intranet migration.

EDUCATION

Southern New Hampshire University
Bachelor of Science • Computer Science
3.9 GPA

Devry University
Associate of Arts • Web & Multimedia Design
3.8 GPA (Valedictorian)

Hunter College
Bachelors of Arts • English

LICENSES & CERTIFICATIONS

AI Engineering
Overclock Accelerator • Issued 2025

Full-stack Developer Nanodegree
Udacity • Issued 2020

Cloud Developer Nanodegree
Udacity • Issued 2020

SKILLS

Claude Code • OpenAI Codex • LangChain • LangGraph • Multi-Agent Orchestration • Agent Skills • MCP Integrations • RAG Pipelines • Prompt & Context Engineering • Spec Driven Development • Scripting & Prototyping • TypeScript • JavaScript • Node.js • React.js • Next.js • React Server Components • ISR • React Native • GraphQL • PHP • Laravel • Python • Flask • SQL • NoSQL • Docker • AWS • GCP • Azure • Vercel • Cloudflare • Netlify • CI/CD • Git • GitHub Actions • GitLab • Monorepos • Jest • React Testing Library • Playwright • SonarQube • OpenObserve • Splunk • Functional Testing • Automation Testing • Regression Testing • Agile/SDLC • WordPress CMS • Web Performance Optimization • JIRA • Confluence • Figma • Responsive Design • Team Leadership & Mentorship • Engineer Onboarding • Cross-functional Collaboration • Stakeholder Communication
